## Geometry Argumentation - Special Right Triangles

Marianna and Jade created their own special right triangles, $\Delta \mathrm{ABC}$ and $\Delta \mathrm{ABD}$. They drew the following diagram. Marianna and Jade both want the length of $\overline{A C}$ to be $5 \sqrt{2}$. However, Marianna and Jade disagree on the length of $\overline{A D}$. Marianna thinks that the length of $\overline{A D}$ will be less than 9 . Jade disagrees, and thinks that the length of $\overline{A D}$ will be greater than 9 . Which student is correct, and what is the correct answer? Construct a mathematical argument to convince a classmate that your answer is correct.
