

Peer Feedback Argument Frame: Stuffed with Pizza

Question:

Tito ate $\frac{1}{4}$ of a cheese pizza, $\frac{3}{8}$ of a pepperoni pizza, and $\frac{1}{2}$ of a mushroom pizza. Louis ate $\frac{5}{8}$ of a cheese pizza and $\frac{1}{2}$ of a mushroom pizza. All the pizzas were the same size. Tito says he ate more pizza because Louis did not eat any pepperoni pizza, and Louis says they each ate the same amount of pizza. Do you agree with either student? Why or why not? Explain your reasoning.
