

## Brief Argument

Aaron is on his high school's wrestling team. He and his teammates want to paint the school's mascot on the wrestling mats.

The t-shirts sold at school show the mascot, a bulldog, with the nose that is 1.2 cm long and a front paw that measures 4.5 cm across.

If Aaron and his teammates plan to paint an enlarged image of the bulldog with a nose that is 6 cm long, how long should the front paw be?

**Explain your reasoning.**

**Evidence** (this is the math I did to solve the problem):

**Reasoning** (this is my claim and a brief written explanation to support it):
